History Rufus was originally designed as the latest open source replacement for the HP USB Disk Storage Format Tool for Windows, which was primarily used to create DOS bootable USB flash drives. Rufus' first official release, version 1.0.3 (previous version internal/alpha only [7]) was originally MS-DOS support only and was released on December 11, 2011. Version 1.0.4 introduced Support for FreeDOS, and version 1.1.0 introduced ISO image support. Until 1.2.0, there were two versions available: one for MS-DOS and one for FreeDOS. UEFI boot support was introduced in version 1.3.2 and localized in 1.4.0 and Windows To Go 2.0. The latest version that is compatible with Windows XP and Vista is 2.18. Rufus features support a variety of bootable .iso files, including a variety of Linux distributions, Windows installation .iso files, and raw disk image files (.iso compressed files). If necessary, install a bootloader, such as SYSLINUX or GRUB, on the flash drive to make it bootable. You can also install MS-DOS or FreeDOS on a flash drive or create Windows To Go bootable media. [10] Supports flash drive formatting as FAT, FAT32, NTFS, exFAT, UDF, or ReFS file system. [11] Rufus can also be used to calculate the MD5, SHA-1, and SHA-256 hashes of the currently selected image. File Name: rufus-2.5.exe MD5 Checksum: 914328d9d8c5bceea1a66e8281b8c16 Rufus is a utility that helps you format and create bootable USB flash drives such as USB keys, pen drives, and memory sticks. This is especially useful if you need to create USB installation media from bootable ISOs (Windows, Linux, etc.), run on systems that do not have an OS installed, flash OS or other firmware from DOS, and run low-level utilities. If you create a DOS bootable drive and use a non-U.S. keyboard, Rufus will try to select a keyboard layout based on the locale of the system. In this case, MS-DOS supports more keyboard layouts, so the default choice, FreeDOS, is recommended over MS-DOS. The latest version of Rufus Free Download Windows PC. This is a complete offline setup installer for the software. Creating an ISO image from a physical disc or from a set of files is very easy to do however, through the use of a CD burning application, such as the free available CDBurnerXP or BurnAware.It can be essentially useful for case where you need to create USB installation media from bootable ISOs (Windows, Linux, UEFI, etc.) flash a BIOS or other firmware from DOS you want to run a low-level utility Also Available: Download Rufus Portable Name Last Modified Size Description Parent Directory -
